-I- FUNCTION: THE S-LAYER IS A PARACRYSTALLINE MONO-LAYERED ASSEMBLY
OF PROTEINS WHICH COAT THE SURFACE OF BACTERIA. THIS PROTEIN IS
CRITICAL FOR VIRULENCE.

-I- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A
S-LAYER WITH HEXAGONAL SYMMETRY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S-layer

Microbiol. 3:1579-1586(1989).

-i- FUNCTION: THE 120 kDa SURFACE-EXPOSED PROTEIN IS A MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.

-i- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVEREI LAYER WITH HEXAGONAL SYMMETRY.

-i- SIMILARITY: BELONGS TO THE RICKETTSIAE OMPA/OMPB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "The 120 kilodalton outer membrane protein (rOmp B) of Rickettsia rickettsia is encoded by an unusually long open reading frame: evidence for protein processing from a large precursor."; mol. Immun. 60:159-165(1992).

-1- FUNCTION: THE 120 kDa SUFFACE-EXPOSED PROTEIN IS A MAJOR STRUCTURAL PROTEIN WHICH WAY PLAY A ROLE AS A RICKETTSIAL VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.

-1- FUNCTION: THE 32 kDa BETA PEPTIDE MAY SERVE AS A MEMBRANE FUNCTION: THE 32 kDa BETA PEPTIDE MAY SERVE AS A MEMBRANE SUBJECTURAL THIS BACTERIUM IS COVERED S-LAYER WITH HEXAGONAL SYMMETRY.

-1- SUBGELULIAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED S-LAYER WITH HEXAGONAL SYMMETRY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-JUL-1998 (Rel. 36, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Outer membrane protein B precursor (168 Mas surface-layer protein)
(Surface protein antigen) (Cell surface antigen 5) (Sca5) (rOmpB)
(rOmp B) [Contains: 120 kDa surface-exposed protein (Surface protein antigen) (120 kDa outer membrane protein ompB); 32 kDa beta peptide]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     STRAIN-Wilmington;
